

# ACME SCREW ASSEMBLIES

*Helix Linear Technologies, Inc., Beachwood, Ohio USA*

Helix Linear Technologies is the most high-tech lead screw manufacturing facility globally, producing the broadest product line of any lead screw manufacturer. We offer precision rolled, milled, and ground screws in diameters from 1.6 mm to 152.4 mm and leads from .3 mm to 75 mm. When you need Acme, Trapezoidal, or high-helix lead screws with precision low-backlash nuts, or a state-of-the-art anti-backlash design, we deliver the highest quality coupled with exceptional value.

Helix Linear Technologies offers a complete line of nuts in standard, anti-backlash, or custom designs with centralizing threads to match our precision lead screws, making our assemblies the lowest backlash product on the market. Our nuts come in various materials, including Acetal, PEEK, Bronze, Ertalyte, Carbon-Filled HPV, Turcite, Torlon, Vespel, PAI, PVDF, and medical-grade Acetal to fit your specific use and environment.

## **CULTURE**

Our culture is rooted in teamwork and consists of smart, happy, and competitive professionals focused on manufacturing innovative products and delivering precise electromechanical linear motion solutions. We are in the people business, as well as the product business. Our talented employees make and sell our products, and our extraordinary scope of teamwork keeps our company healthy.

## **OPERATIONS**

Our company delivers high-quality products and offers world-class engineering support, solving the most demanding linear motion applications across multiple industries. We manufacture components and subsystem solutions to high volume OEMs and custom machine builders to ensuring their success.

## **COMPANY**

Helix Linear Technologies is a global supplier in the medical device, life science, security, semiconductor, aerospace, electromechanical, and defense industries. Leading the linear motion industry by manufacturing the highest quality linear actuation solutions in the world, we focus on helping our customers be productive and profitable. Our innovative product design solves real-world linear motion issues and builds a foundation for long term success.

## **HISTORY**

Helix Linear Technologies was founded in 2011 to meet the demand for high-quality lead screws in the growing electromechanical actuation industry. Our rapid growth has included the addition of end-to-end linear actuator solutions, providing integrated solutions.

## ACME SCREWS AND NUTS MATERIALS & MANUFACTURING

Helix manufactures precision Acme screws by thread rolling, thread milling, or thread grinding processes. Each process produces high precision screws. Helix Acme screw products feature centralizing thread forms for smooth, no-wedging performance.

### ROLLED ACME SCREWS

Helix offers the largest selection of rolled acme screw sizes in the industry. Rolled thread screws are cost effective and are stocked for quick delivery.

### GROUND ACME SCREWS

Ground thread screws offer higher lead accuracy for applications where positioning tolerances are extremely critical.

*Custom acme screw assemblies*

Helix acme screws are used in a variety of packaging applications

Mobile rocket launching system

SCREW TYPE	MATERIAL	THREAD CLASS	LEAD ACCURACY	SCREW DIA.	SCREW LENGTHS
Rolled	Alloy	Centralizing 2C or Stub	± .0003"/" up to 2½" dia.	¼" to 6"	Limited only by material availability
	Stainless	Centralizing 2C or Stub	± .0003"/" up to 1½" dia.	¼" to 1½"	Limited only by material availability
Ground	Alloy	Centralizing 3C or 4C	± .0005"/ft	¼" to 4"	up to 19"
	Stainless	Centralizing 2C or 3C	± .0005"/ft	¼" to 4"	up to 19"

	ACME & TRAPEZOIDAL ALLOY	STAINLESS STEEL
Screw Material	4140	300 Series
Minimum Hardness	200 Brinell	170 Brinell
Tensile Ultimate Strength	95,000 psi	85,000 psi
Finish	Black Oxide	Natural

Materials used in Helix Acme nuts have been selected for low friction, minimum wear, long life, and clean operation.

### BRONZE ACME & TRAPEZOIDAL NUT

Special high tensile bronze is selected for our smooth running, anti-wedging bronze nuts.

- Material: Helix Bronze
- Tensile Yield: 50,000 psi
- Tensile Ultimate: 65,000 psi
- Hardness: HB75
- Dynamic co-efficient of friction: 0.125 with Helix Lubricant

Nut specifications can be found in the Quick References on pages 14-15 and 56. Flange and nut dimensions are listed with the appropriate screw data on pages 30-55 and 60-75.

### PLASTIC ACME & TRAPEZOIDAL NUT

The high strength and inherent lubricity of plastic Acme and Trapezoidal nut material can result in product life that can equal or exceed conventional nut materials.

- Material: Helix Acetyl
- Tensile Strength @70°F: 8,000 psi
- Compressive Strength @70°F: 16,000 psi
- PV Limit: 2,700 lubricated
- Co-efficient of friction: 0.10 lubricated

### POWERAC™ FLANGES FOR BRONZE & PLASTIC NUTS

Made from carbon steel with black oxide finish. See page 7 for Mounting and Pinning Acme Nut flange installation instructions.

## GLOSSARY AND TECHNICAL DATA

### ACME THREAD FORM TERMS

**THREAD TYPES** - The Acme thread form, established over 100 years ago, replaced square thread screws, which had straight-sided flanks and were difficult to manufacture.

There are three main classes of Acme thread forms: General Purpose (G), Centralizing (C), and Stub Acme. The General Purpose and Centralizing thread forms have a nominal depth of thread of  $0.50 \times \text{pitch}$  and have a  $29^\circ$  included thread angle. Some Helix sizes have  $40^\circ$  included angle. Trapezoidal thread forms have a  $30^\circ$  included thread angle.

When compared to general-purpose thread forms, centralizing threads are manufactured with tighter tolerances and reduced clearance on the major diameter.

*Helix ACME screws are used in a variety of satellite dish applications*

FIG. 1

#### NORMALLY LOADED NUT

#### SIDE LOADED CONVENTIONAL 'G' CLASS NUT

#### SIDE LOADED CENTRALIZED 'C' CLASS NUT

Stub Acme threads follow the same basic design, but have a thread depth less than one half the pitch.

If an Acme nut is side loaded with a radial load, a "G" class will "wedge" when the nut thread flanks come in contact with the screw thread flanks. To prevent wedging, less clearance and tighter tolerances are allowed between the major diameter of the nut and the major diameter of the screw.

**CAUTION:** Although a side load will not cause a centralizing thread to wedge, the nut is not designed to operate with a side load such as a pulley, drive belt, etc. See "Load Definition" section for further information. (See FIG. 1)

*ACME screws in textile applications*

ACME screws position solar panels

Lead screws position CNC laser cutting machines

**SCREW STARTS** - The number of independent threads on the screw shaft; example one, two or four. (See FIG. 2 below)

FIG. 2

**LAND (major) DIAMETER** - The outside diameter of the screw.

**PITCH DIAMETER** - On an Acme screw, this diameter is approximately halfway between the land diameter and the root diameter. It is the diameter at which the thread thickness is equal to the space between threads.

**ROOT (minor) DIAMETER** - The diameter of the screw measured at the bottom of the thread.

**PITCH** - The axial distance between threads. Pitch is equal to the lead in a single start screw.

**LEAD** - The axial distance the nut advances in one revolution of the screw. The lead is equal to the pitch times the number of starts.

**PITCH × STARTS = LEAD**

**NOTE:** Helix Acme screw designations reference major diameter and effective turns per inch. For example: 1/4"–4 RH requires four turns for one inch of travel. A 1/4"–4 RH has 4 starts and a 0.062" pitch.

**0.062" PITCH × FOUR STARTS = 0.250" LEAD**

**LEAD ACCURACY** - Lead accuracy is the difference between the actual distance traveled versus the theoretical distance traveled based on lead. For example: A screw with a 0.5 inch lead and 0.004 inch per foot lead accuracy rotated 24 times theoretically moves the nut 12 inches. (24 Revolutions × .500 inches per revolution = 12.000 inches of travel)

With a Lead accuracy of .0003"/inch, actual travel could be from 11.996 to 12.004 inches.

Refer to the listings in the design guide for the lead accuracy of a particular screw.

## GLOSSARY AND TECHNICAL DATA *(continued)*

**Matched Lead** - When multiple screws are used to move a load with precise synchronicity, screws of similar lead accuracy can be factory selected and supplied as sets. Consult factory for matched lead set tolerances.

**Straightness** - Although PowerAc™ Acme Screws are manufactured from straight, cylindrical material, internal stresses may cause the material to bend or yield.

When ordering random lengths or cut material without end machining, straightening is recommended. Handling or machining of screws can also cause the material to bend or yield. Before, during and after machining, additional straightening is required. When ordering screws with machined ends from Helix, the following straightness tolerances can be expected:

**PowerAc Rolled Acme Screws** are straight within 0.010 inch/foot and will not exceed 0.030 inch in any 6-foot section, when shipped from the factory.

**PowerAc Ground Acme Screws** are straight within 0.001 inch/foot when shipped from the factory. If tighter straightness tolerances are required, contact Helix customer service.

**Life** - PowerAc Acme Screws are manufactured from high quality materials with excellent dynamic properties. Because of the variable effects of friction, lubrication and cleanliness, a specific life cannot be predicted. Proper lubrication, regular maintenance, and operation within specified limits will extend the life of PowerAc Acme Screws.

**Efficiency** - Efficiency of PowerAc Acme Screw assemblies range from 15% to 85%. These efficiencies are dependent upon nut material, lubrication, lead and thread form. The efficiencies for each assembly are listed on the following pages.

**Backdriving** - Normally, Acme screws are used to convert rotary motion into linear motion. Backdriving is the result of the load pushing axially on the screw or nut to create rotary motion. Generally, a nut with efficiency greater than 50% will have a tendency to backdrive. If a self-locking assembly is required, select a nut with efficiency below 35%.

**CAUTION:** Vibration can cause any acme screw assembly to creep or backdrive. When using lead screws, applications should be analyzed to determine the necessity of a brake, especially when the possibility of injury may occur.

FIG. 3 Adjustable backlash nut assembly

**Backlash** - Backlash (lash) is the relative axial clearance between a screw and nut without rotation of the screw or nut. Backlash information for PowerAc Acme Screws and Nuts is listed within the data section of this catalog. Lash will always increase with use. Helix has developed several unique ways to reduce or remove the lash between the screw and nut.

For screw diameters over 5/8 inch, PowerAc No-Lash™ Flanges are available. The PowerAc No-Lash Flange is identical to a standard flange except for slotted mounting holes. The backlash can be removed by using a nut with a PowerAc No-Lash Flange in combination with a standard nut and flange. By rotating the slotted PowerAc No-Lash Flange and nut relative to the other, the thread in the second nut advances until the lash is reduced.

As the nuts wear and backlash increases, loosen the mounting bolts and readjust the PowerAc No-Lash Flange and nut until the lash is minimized. (See FIG. 3)

For a complete PowerAc No-Lash Flange assembly order 2 standard nuts, 1 standard flange and 1 No-Lash Flange. For example a 3/4"-2 assembly requires the following:

2	-	20072	Standard Nuts
1	-	70262	Standard Flange
1	-	73262	No-Lash™ Flange

**CAUTION:** When the uncompensated lash is equal to or greater than times the pitch, the assembly should be replaced.

## LOAD DEFINITIONS

**Static Load** - The maximum thrust load – including shock – that should be applied to a non-moving PowerAc Acme nut assembly. Actual maximum static load may be reduced based on end machining and screw mounting hardware.

**Dynamic Load** - The maximum recommended thrust load which should be applied to the PowerAc Acme screw and nut assembly while in motion.

**PV Load** - Any material which carries a sliding load is limited by heat buildup caused by friction. The factors that affect heat generation rate in an application are the pressure on the nut in pounds per square inch of contact area and the surface velocity in feet per minute at the major diameter. The product of these factors provides a measure of the severity of an application.

**Tension Load** - A load that tends to “stretch” the screw. (See FIG. 4)

**Compression Load** - A load that tends to “squeeze” the screw. (See FIG. 4)

FIG. 4

**Thrust Load** - A load parallel to and concentric with the axis of the screw. (See FIG. 5)

**Overturning Load** - A load that tends to rotate the nut radially around the longitudinal axis of the screw. (See FIG. 5)

**Side Load** - A load that is applied radially to the nut. (See FIG. 5)

FIG. 5

## DESIGN CONSIDERATIONS

### Mounting and Pinning of Acme Flange

Flanges must be secured to Acme nuts. The preferred method of locking a flange to a nut is a pin or set screw parallel to the screw which intersects the flange/nut mounting thread. Because of the dissimilarity of materials, the hole may need to be milled, not drilled. Alternatively, the flange may be drilled and tapped radially for a set screw. After assembly of the flange to the nut, spot drill the nut threads through the flange and install a dog point set screw from the flange O.D. into the nut O.D. threads. Avoid getting metal chips in the nut when drilling. (See FIG. 6 and 7 for pin size)

FIG. 6

FIG. 7

DIAMETER	DESCRIPTION	QTY
up to .625	1/8 x 1/4 Slotted Spring Pin	1
.75 to 1.0	#10 - 24 x 1/4 Set Screw	1
1.125 to 1.375	1/4 - 20 x 1/4 Set Screw	2
1.5 to 3.0	5/16 - 18 x 1/2 Set Screw	2
3.375	3/8 - 16 x 3/4 Set Screw	2
4+	1/2 x 13 x 1 Set Screw	2

Commercially available thread adhesives may be used for light load applications. Follow the manufacturers’ recommendations to ensure a satisfactory bond. Avoid getting the adhesive onto the acme screw thread.

**Lubrication** - Proper lubrication must be provided to achieve satisfactory service life. Helix PowerAc lubricant (E-100 spray lube or PAG-1 grease) is recommended for applications using PowerAc nuts. Lubrication intervals are determined by the application. It is required that screw assemblies are lubricated often enough to maintain a film of lubricant on the screw.

**Driving Torque** - Driving torque is the torque required to move a load and is calculated by multiplying the force needed by the “Torque to raise one lb” value listed in the technical data section for each screw and nut size.

**EXAMPLE:** To lift a 1,000 lb load using a 1” - 6 RH Acme screw with plastic nut, 74 in lb of torque are required.

$$.074 \text{ in-lb/lb} \times 1000 \text{ lb} = 74 \text{ in lb}$$

## GLOSSARY AND TECHNICAL DATA *(continued)*

### DESIGN CONSIDERATIONS *(continued)*

**Temperature** - With proper lubrication, PowerAc™ Acme Screws with bronze nuts operate efficiently between 15°F and 350°F, and plastic nuts between 15°F and 175°F. Consult the factory for low temperature applications.

**End Machining** - To obtain optimum performance of your acme screw assembly, it is recommended that the machining be performed at the Helix factory. Screws may be purchased machined to your specifications or to standard end machining designs shown on page 77.

**EZZE-MOUNT™** - Acme screws in operation generate an axial load and a radial load; therefore, end mounts must be designed to accommodate these loads. Helix has designed precision end mounts to work specifically with acme screws. For a detailed description of these bearing supports, see pages 77-91. An EZZE-MOUNT can be shipped pre-assembled to a PowerAc™ Acme Screw. For complete PowerAc™ Acme Screw Assemblies refer to pages 16-25.

**Optional Surface Coatings** - Consult Helix engineers for specific surface coatings for anti-corrosion and lubrication.

**Boots and Bellows** - For contaminated environments, use of a boot or metal cover to protect the acme screw assembly is recommended.

### ACME SCREW SELECTION

The selection of the correct Acme screw and nut for a particular application involves four interrelated factors. Before attempting to determine the Acme screw and nut combination, the following values must be known:

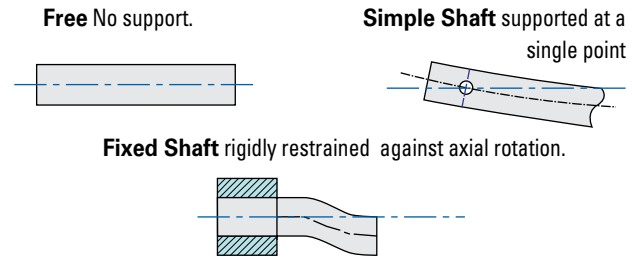

- Axial load measured in pounds or newtons
- Speed measured in inches or millimeters per minute
- Length between bearings measured in inches or millimeters
- End fixity type

**Load** - The loads that need to be considered are the static loads, dynamic loads, reaction forces and any external forces affecting the screw. See Load definitions section on page 7 for details.

**Speed** - The travel rate (linear speed) is the rpm at which the screw or nut is rotating multiplied by the lead of the screw.

**Length** - The unsupported length of the screw.

**End Fixity** - End fixity refers to the method by which the ends of the screw are supported. The degree of end fixity is related to the amount of restraint of the ends of the screw. Examples of the three basic types of end fixity are:

**Simple End** fixity can be provided through a single bearing support. Multiple or spaced pairs of bearings are more rigid than a "Simple" support, but because of their compliance are not truly "Fixed". A screw can be supported with different combinations of end fixity. (See FIG. 8)

FIG. 8

One end with a Double Bearing EZZE-MOUNT, other end Free. Use Line A in reference to the charts shown on pages 12-13 and 58-59. **NOTE:** Not recommended for any application other than short travels and slow speeds.

One end supported with a Double Bearing EZZE-MOUNT, other supported with a Single Bearing EZZE-MOUNT. Use Line B in reference to the charts shown on pages 12-13 and 58-59.

Both ends supported with a Double Bearing EZZE-MOUNT. Use Line C in reference to the charts shown on pages 12-13 and 58-59.

FIG.8 (Cont'd)

Both ends supported with a Quad Bearing EZRF EZZE-MOUNT. Use Line D in reference to the charts shown on pages 16-17 and 62-63.

**NOTE:** When supporting a screw with two Quad Bearing EZRF Mounts, the screw is highly ridged and extra care should be taken to insure compliance in the assembly design.

**Critical Speed** - Once the load, speed, length and end fixity are identified, the next factor to consider is the critical speed. The speed that excites the natural frequency of the screw is referred to as the critical speed. Resonance at the natural frequency of the screw will occur regardless of the screw orientation (vertical, horizontal etc.) or if the system is designed so the nut rotates about the screw. The critical speed will vary with the diameter, unsupported length, end fixity and rpm. Since critical speed can also be affected by shaft straightness and assembly alignment, it is recommended that the maximum speed be limited to 80% of the calculated critical speed. The theoretical formula to calculate critical speed in rpm is:

$$N = \frac{C_s \times 4.76 \times 10^6 \times d}{L^2}$$

**WHERE:**

- N = Critical Speed (rpm)
- d = Root Diameter of Screw (inch)
- L = Length Between Bearing Supports (inch)
- C<sub>s</sub> = 0.36 for one end fixed, one end free  
1.00 for both ends simple  
1.47 for one end fixed, one end simple  
2.23 for both ends fixed

The critical speed chart on pages 13 and 59 are provided to quickly determine the minimum screw size applicable for Helix EZZE-MOUNT designs. If the selected Acme screw does not meet critical speed criteria, consider the following options:

- a) Increase screw lead and reduce rpm
- b) Change end fixity (e.g. simple to fixed)
- c) Increase screw diameter

**Column Strength** - When a screw is loaded in compression (see compression load definition on page 11), its limit of elastic stability can be exceeded and the screw will fail through bending or buckling.

The theoretical formula to calculate the column strength in pounds is:

$$P_{cr} = \frac{14.03 \times 10^6 \times F_c \times d^4}{L^2}$$

**WHERE:**

- P<sub>cr</sub> = Maximum Load (lb)
- F<sub>c</sub> = End Fixity Factor  
0.25 for one end fixed, one end free  
1.00 for both ends supported  
2.00 for one end fixed, one end simple  
4.00 for both ends rigid
- d = Root Diameter of Screw (inch)
- L = Distance between nut and load carrying bearing (inch)

The column strength chart on page 16 may be used to verify that the screw can carry the required load without buckling.

The charts show the theoretical limitations of each screw on a separate line. The lines are limited horizontally by the slenderness ratio and vertically by the maximum static capacity of the bronze nut. Actual load is limited by the maximum nut capacity.

If the selected screw does not meet compression load criteria, consider the following options:

- a) Change end fixity (e.g. simple to fixed)
- b) Design to use screw in tension
- c) Increase screw diameter

**PV Value** - For plastic nuts, the PV value needs to be checked (see the PV load definition page 11) The operating load values for the plastic nuts are based on a pressure of 1,250 lb per square inch. Any loads less than the operating load can be evaluated by using the following formula:

$$P = \frac{\text{Actual Operating Load}}{\text{Chart Operating Load}} \times 1250$$

**V** is the relative speed between the nut and the screw in feet per minute. **V** can be calculated by using the following formula:

$$V = \frac{\text{Outside Dia. (in) of the Screw} \times \pi \times \text{Operating Speed (rpm)}}{12}$$

It is recommended that P × V be limited to values less than 2,700.

## APPLICATION EXAMPLE

Helix acme screw used in a manual lathe

### APPLICATION

Given the following requirements, select an Acme screw for an application which uses Acme screws for an automatic part feeder on a machine.

#### Specifications:

- 5,000 lb load supported and guided on linear bearings moving horizontally
- 36" travel
- Complete 36" travel in 10 seconds
- Bearing Support Undecided
- Positioning accuracy  $\pm 1/4$ "

#### STEP 1

**Find the axial force required to move load.** The axial force is determined by multiplying the coefficient of friction of the guidance system by the load.

$$F = \mu \times N$$

$\mu$  = coefficient of friction of the guidance system

Using Helix linear bearings in this application;

$$\begin{aligned} \mu &= \text{Coefficient of Friction for lubricated Helix Linear Bearings} = .0013 \\ N &= \text{Load} = 5000 \text{ pounds} \\ F &= \mu \times N \\ F &= .0013 \times 5000 \text{ lb} \\ F &= 6.5 \text{ lb} \end{aligned}$$

**Therefore:** The Axial Force the screw must produce to move the load is 6.5 lb.

#### STEP 2

##### Find Average Travel Rate.

The average travel rate is determined by dividing travel distance by travel time.

$$\begin{aligned} V_{\text{avg}} &= D/t \\ D &= \text{distance} = 36 \text{ inches} \\ t &= \text{total time} = 10 \text{ seconds} \\ V_{\text{avg}} &= D/t \\ V_{\text{avg}} &= 36 \text{ in}/10 \text{ seconds} \\ V_{\text{avg}} &= 3.6 \text{ in/sec. or } 216 \text{ in/minute} \end{aligned}$$

**Therefore:** The average travel rate is 216 in/minute

#### STEP 3

**Find Maximum Travel Rate.** When considering critical speed, peak velocity should be used. Using a basic triangular motion profile (acceleration = deceleration with no constant velocity travel), the peak velocity equals twice the average velocity.

$$\begin{aligned} V_{\text{peak}} &= 2 \times V_{\text{avg}}. \\ V_{\text{avg}} &= 3.6 \text{ in/sec. or } 216 \text{ in/minute} \\ V_{\text{peak}} &= 2 \times V_{\text{avg}}. \\ V_{\text{peak}} &= 432 \text{ in/minute} \end{aligned}$$

The Maximum Travel Rate is 432 in/min during the traverse of 36 inches in 10 seconds.

## STEP 4

**Determine total unsupported length.** Total Travel is given as 36 inches, but extra screw length should be considered for travel nut, carriage, and or any extra screw length for over-travel. Based on the travel nut and attachment of the nut to the carriage in this application, it is determined an extra 4" of screw length will be required. (Refer to the dimensional information of the particular nut used).

$$L \text{ TOTAL} = 36 \text{ IN} + 4 \text{ IN} = 40 \text{ INCHES}$$

The total unsupported length to be used for critical speed and column loading calculations is 40 inches.

## STEP 5

**Determining end fixity.** The layout of the application shows that adequate space is available to use a double bearing EZZE-MOUNT at each end. (See end fixity definitions on page 8) End Fixity = Type C.

## STEP 6

**Select a screw based on the critical speed.** Use previously determined values with the Critical Speed chart on page 13.

Max Travel Rate = 432 in/min  
End Fixity = Type C  
Length Between Bearing Supports = 40 inches

Based on the Critical Speed Chart, a 1" - 5 Acme Screw (1 inch diameter, 5 threads per inch) is selected.

## STEP 7

**Check Column Strength of screw.** Use previously determined values with the Column Strength chart on page 16.

Load = 6.4 pounds  
End Fixity = Type C  
Length Between Bearing Supports = 40 inches  
Based on the Column Strength Chart,  
the load is within the column strength of this screw.

**NOTE:** If this were a vertical application, the full 5,000 pound load would be used. Also, under high acceleration conditions, the inertia load must be determined and added to the total load for column considerations.

## STEP 8

**Check the PV Value.** This relates the pressure load to the speed of the nut. First find the actual P value based on the calculation. Using the formulas from page 9:

$$P = \frac{\text{Actual Operating Load}}{\text{Nut Dynamic Load Capacity}} \times 1250 \text{ psi}$$

$$\frac{6.5 \text{ pounds}}{2,500 \text{ pounds}} \times 1250 \text{ psi} = 3.2 \text{ psi}$$

Next the "V" value or maximum relative speed between the screw and nut is:

$$V = \frac{\text{Outside Dia. (in.)} \times \pi \times \text{Operating Speed (rpm)}}{12 \text{"/ft.}}$$

$$\frac{1 \text{"} \times \pi \times 2160 \text{ rpm}}{12 \text{"/ft.}} = 565 \text{ ft/per minute}$$

This results in a PV value of 3.2 times 565 or 1,808 below the maximum recommended value of 2,700.

## STEP 9

**Create a reference number for the assembly.** See page 27 for Reference Number System Chart. The 1" - 5 Acme Screw is thread form code 105. The screw material is right-hand thread, alloy steel. The end code used for machining this screw is end code 17. The type of machining will be a Type 3 on both ends of screw to allow for mounting a double bearing.

**EZZE-MOUNT.** One end will have a section to attach a coupling, the other will not. To determine the overall length of the assembly, add up the length of the ends plus the unsupported length:

One end Type 3K (drive end with keyway) = 3.65"  
One end Type 3N (no drive end) = 2.33"  
40 inches between supports  
Over-all length is 40" + 3.65" + 2.33" = 45.98"

### The Part List Includes:

One Plastic Acme Nut – 30105  
One Steel Flange - 70275  
EZZE-MOUNT Bearing blocks (2 req'd) - EZM-3017

To receive an assembly of these components with the EZZE-MOUNT, nut, and flange installed on the screw, the order reference number is:

**105 - RA/EK/EN/45.98/30105/FS**

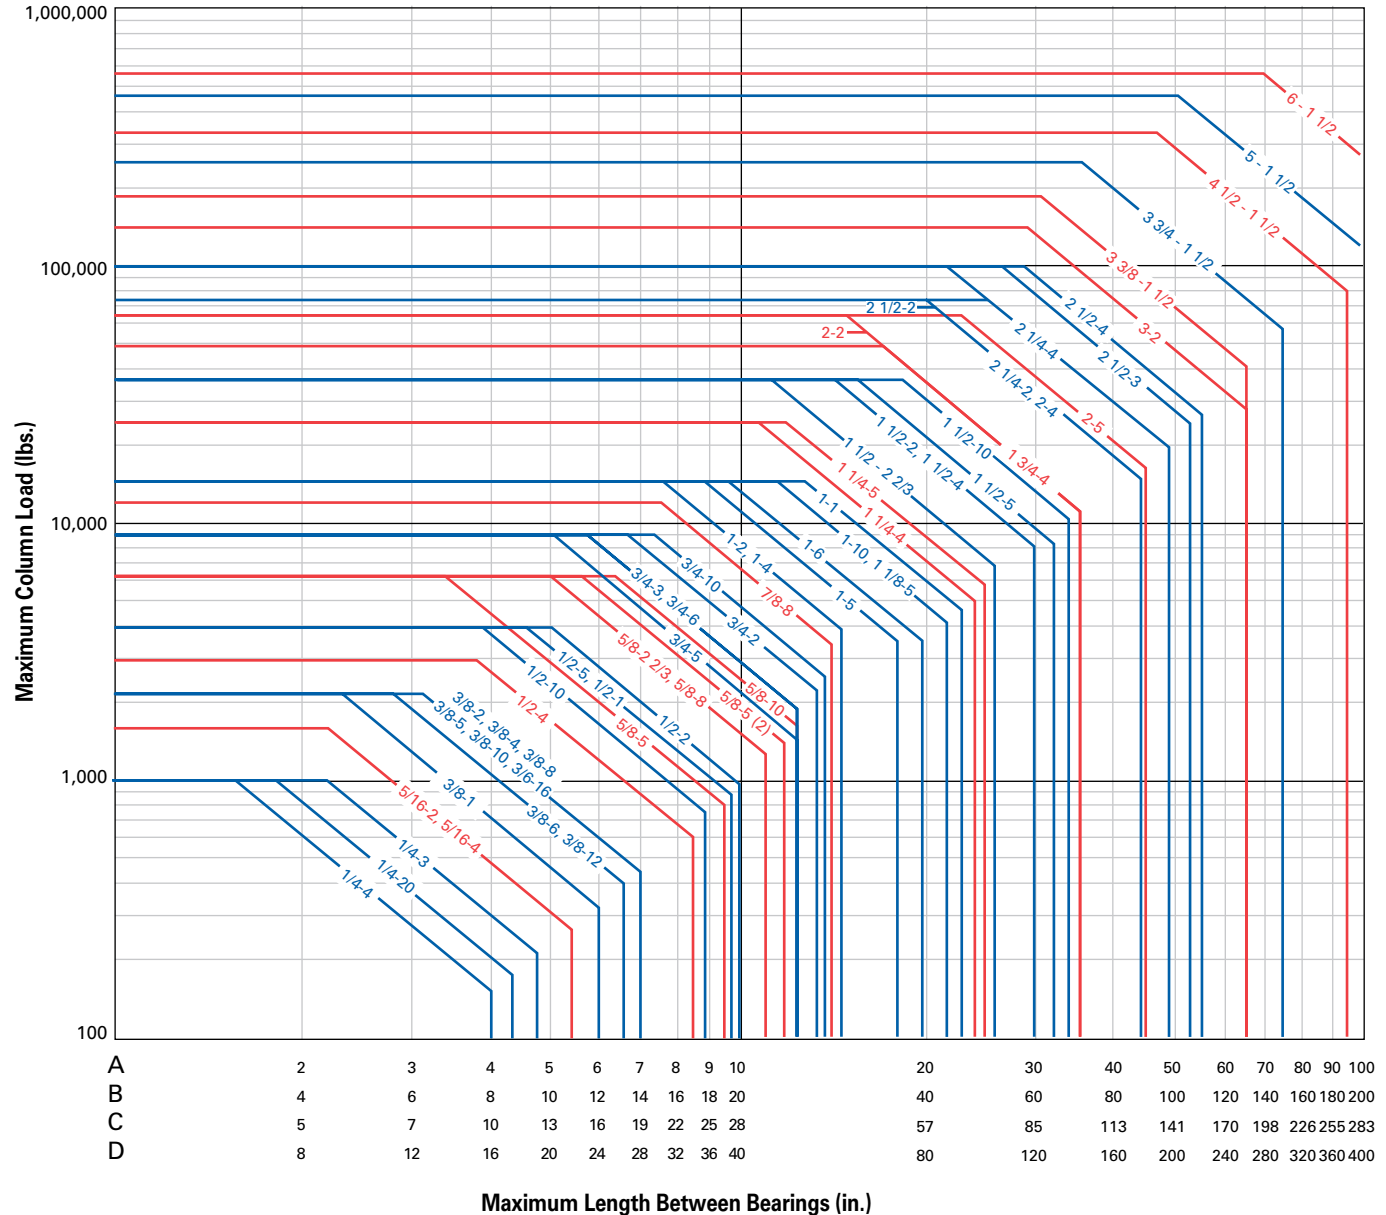

**NOTE:** The nut will be installed with the flange facing toward the first specified end. In this example, the EK end.

## COLUMN STRENGTH: ACME INCH SCREWS

**TO USE THIS CHART:** Find a point at which the maximum length between bearing support and acme nut intersects the maximum load. Be sure the screw selected is above and to the right of that point.

Acme Screws are limited by both Maximum Static Load and Slenderness Ratio. See pages 8-9 for reference description on A-B-C-D end fixity.

### CRITICAL SPEED: ACME INCH SCREWS

**TO USE THIS CHART:** Determine maximum travel rate required. Determine screw length L. Find point at which travel rate and screw length intersect and select a screw above and to the right of that point.

ACME SCREW ASSEMBLIES

The specifications and data in this publication are believed to be accurate and reliable. However, it is the responsibility of the product user to determine the suitability of Helix Linear Technologies products for a specific application. While defective products will be replaced without charge if promptly returned, no liability is assumed beyond such replacement.

## QUICK REFERENCE: ACME INCH SCREWS AND NUTS

## STANDARD HELIX COMPONENTS AND SERVICES

**Acme Screw**

**Bronze Nut**

**Flange**

**End Machining**

**HELIX ACME SCREW AND NUT ASSEMBLIES** provide ease of application, as all that is required is installation. Helix assemblies offer turn key solutions that only require a power source (hand operation or motor). All of the elements are available for quick delivery from shelf stock. Component and assembly drawings are available from CAD drawings that can be configured online. Contact our sales engineers for assistance.

**EZZE-MOUNT™ Bearing Mounts**

**EZZE-MOUNT™ Motor Mounts**

*Helix Acme screws are used in a variety of life science applications*

## ACME SCREW ASSEMBLIES Lubricants

### PROLONG ACME SCREW ASSEMBLY RELIABILITY AND LIFE

Proper lubrication is the key to continued performance and reliability of Acme screw assemblies. Use E-100 spray and PAG-1 grease lubricants to maximize life of your Acme screw assembly.

### BENEFITS

- Shear Stability
- High Temperature Resistant
- Corrosion Protection
- Separation Resistant
- Extreme Pressure Properties
- Shelf Stable
- Water Resistant

Product Name	NLGI Grade Number	Penetration (worked)	Dropping Point	Gelling Agent	Net Contents per Unit	cst @40°C	Oil Viscosity		Temp. Range	Quantity	Part No.	Total Weight
							cst @100°C					
<b>PAG-1 Grease</b>	2	285	550°C	Calcium	1 lb	96	113	15°F to 400°F	1	NLU-1001	1.25 lb	
									Case of 12	NLU-2001	18 lb	
<b>E-100 Spray</b>	2	285	550°C	Calcium	12 oz	96	113	15°F to 400°F	1	NLU-1002	1 lb	
									Case of 12	NLU-2002	15 lb	

### Greases for All Purpose Applications

Part Number	Volume	Temp Range (C)
<b>APG-2G</b>	2 gram Packet	-54 to 125
<b>APG-50G</b>	50 gram Jar	

**Applications:** A lithium soap thickened, light viscosity, synthetic hydrocarbon grease for instruments and bearings. Excellent for wide temperature performance.

### Greases for Medical Grade Applications

Part Number	Volume	Temp Range (C)
<b>MLG-4G</b>	4 gram Packet	-65 to 250
<b>MLG-100G</b>	100 gram Jar	

**Applications:** A PTFE thickened, high viscosity, completely fluorinated grease for use in high temperature applications exposed to aggressive chemicals. It possesses excellent thermo-oxidative stability and low vapor pressure characteristics.

### Greases for Semiconductor/Static Dissipative Applications

Part Number	Volume	Temp Range (C)
<b>SSG-3.5G</b>	3.5 gram Pipette	-65 to 250
<b>SSG-50G</b>	50 gram Jar	

**Applications:** A PTFE thickened, heavy viscosity. Perfluoropolyether grease intended for high vacuum and clean room applications, spacecraft and semiconductor manufacturing equipment. Benefits include very low vapor pressure.

### Greases for Military and Aerospace Applications

Part Number	Volume	Temp Range (C)
<b>MAG-4G</b>	4 gram Packet	-65 to 200
<b>MAG-100G</b>	100 gram Jar	

**Applications:** A PTFE Thickened, medium viscosity, completely fluorinated grease intended for components where wide temperature and low torque are critical. Meets MIL-RRF-27617F, Type IV specifications for aircraft ANO instrument; fuel and oxidizer resistant.

**MATERIAL**

- R A**
- R = Right Hand Thread  
L = Left Hand Thread
- A = Alloy Steel, Rolled  
B = Alloy Steel, Milled  
C = Alloy Steel, Ground  
S = Stainless, Rolled  
T = Stainless, Milled  
U = Stainless, Ground
- Note:** Not all materials are available for all sizes.

**FIRST END CONFIGURATION**

- Note:** Both Ends must be specified.
- Single Bearing Supports are used in conjunction with Type 1N end machining.
- Double Bearing Supports are used in conjunction with Type 3K, 3L, or 3N end machining.
- Flanged Fixed Bearing Mounts are used in conjunction with Type 5 end machining.

**EZZE-MOUNT™ End Machining**

(see pages 66-68)

- 1 = Type 1    3 = Type 3  
2 = Type 2    4 = Type 4  
5 = Type 5

**B** = Universal Double Bearing Support End Cap Facing Screw Thread

**C** = Universal Single Bearing Support

**D** = Flanged Single Bearing Support Flange Facing Screw Thread

**E** = Universal Double Bearing Support End Cap Facing Away From Screw Thread

**F** = Flanged Double Bearing Support Flange Facing Screw Thread

**G** = Flanged Single Bearing Support Flange Facing Away From Screw Thread

**H** = Flanged Double Bearing Support Flange Facing Away From Screw Thread

**R** = Flanged Fixed Bearing Support Flange Facing Screw Thread

**EK** EK = Universal Double Bearing Support, with Keyway

**MODIFIER LIST**

- S or M Required
- S = Standard, no additional description required  
M = Modified, additional description required  
T = PTFE coating

**ACME NUT**

Nut will be installed with flange or threaded end toward first end designation. (000000 = No Nut)

**OVERALL LENGTH (OAL)**

Length in inches, 2 place decimal

**SECOND END CONFIGURATION**

Refer to the First End Configuration section  
**Note:** Both Ends must be specified.

**Shaft Extension**

(see pages 66-68)

- N** = No Shaft
- Q** = Handwheel
- K** = Shaft Extension with Keyway
- L** = Shaft Extension without Keyway

**U** = Universal Double Bearing Support with Motor Mount 

**V** = Flanged Fixed Bearing Support Flange Facing Away From Screw Thread 

**Y** = Flanged Double Bearing Support with Motor Mount 

**00** = No End Machining (Screw will be cut to desired length).

**XX** = Custom Machining (Print or specified data must be provided)

F, V or Z are Optional  
F = Round Flange  
V = Single Acme Flange (see pg.10)  
Z = Two Acme Flange (see pg.10)

## TWIN-LEAD ACME SCREW ASSEMBLIES

Twin-lead Acme screws offer dual opposing motion using a single drive system. These one-piece high performance acme screws are made from high alloy steel that is black oxidized for protection and can be assembled with Helix PowerAc™ Acme nuts, flanges and EZZE-MOUNT™ bearing supports (see pages 204-206) to form cost effective systems. Twin-lead Acme screws can be used in molding machines, packaging equipment, food processing machinery, robotics, material handling equipment, tire manufacturing and assembly applications.

Twin-Lead screws stocked for delivery without machined ends are listed in the chart below. To order a twin-lead cut to a custom length and/or with machined ends, select a size from the chart below, determine OAL, LH and RH thread length, nut, flange and, if required, EZZE-MOUNT bearing support.

Consult the Twin-Lead Reference Number System on page 29 to complete your part number.

Screw Size Dia. - Lead	Root Dia (Min)	Max Overall Length	Max Usable LH/RH Thread	Incomplete Overlapping Thread Count	Pg

\* These twin-lead screws are stocked without end machining

**MATERIAL**

**T A**

- T = Twin Lead
- A = Alloy Steel, Rolled
- B = Alloy Steel, Milled
- C = Alloy Steel, Ground
- S = Stainless, Rolled
- T = Stainless, Milled
- U = Stainless, Ground

Note: Not all materials are available for all sizes.

**FIRST END CONFIGURATION (LH thread)**

Note: Both Ends must be specified.

Single Bearing Supports are used in conjunction with Type 1N end machining.

Double Bearing Supports are used in conjunction with Type 3K, 3L, or 3N end machining.

Flanged Fixed Bearing Mounts are used in conjunction with Type 5 end machining.

**SECOND END CONFIGURATION (RH thread)**

Refer to the First End Configuration section on the Left.

Note: Both Ends must be specified.

**OVER-ALL-LENGTH (OAL)**

Length in inches, 2 place decimal

**LEFT HAND THREAD**

Length in inches, 2 place decimal

Note: See figure on page 32

**RIGHT HAND THREAD**

Length in inches, 2 place decimal

Note: See figure on page 32

**LEFT HAND ACME NUT**

000000 = No Nut

**RIGHT HAND ACME NUT**

000000 = No Nut

Note: To Select the Nut Direction After Nut Part # Add

A = Nut Thread or Flange installed toward center of screw

B = Nut Thread or Flange installed toward end of screw

**MODIFIER LIST**

- F = Round Flange
- S or M Required
- S = Standard, no additional description required
- M = Modified, additional description required
- T = PTFE coating

**EZZE-MOUNT™ / End Machining**  
 (see pages 82-85)

- 1 = Type 1
- 2 = Type 2
- 3 = Type 3
- 4 = Type 4
- 5 = Type 5

**EK**

EK = Universal Double Bearing Support, with Keyway

**Shaft Extension**  
 (see pages 82-84)

- K = Shaft Extension with Keyway
- L = Shaft Extension without Keyway
- N = No Shaft
- Q = Handwheel

B = Universal Double Bearing Support End Cap Facing Screw Thread

C = Universal Single Bearing Support

D = Flanged Single Bearing Support Flange Facing Screw Thread

E = Universal Double Bearing Support End Cap Facing Away From Screw Thread

F = Flanged Double Bearing Support Flange Facing Screw Thread

G = Flanged Single Bearing Support Flange Facing Away From Screw Thread

H = Flanged Double Bearing Support Flange Facing Away From Screw Thread

R = Flanged Fixed Bearing Support Flange Facing Screw Thread

U = Universal Double Bearing Support with Motor Mount

V = Flanged Fixed Bearing Support Flange Facing Away From Screw Thread

Y = Flanged Double Bearing Support with Motor Mount

00 = No End Machining (Screw will be cut to desired length).

XX = Custom Machining (Print or specified data must be provided).

## TRAPEZOIDAL LEAD SCREW ASSEMBLIES

With over forty years of experience manufacturing precision Acme screws, Helix has expanded the PowerAc™ offering to include metric lead screws providing design engineers a globally accepted product. Trapezoidal lead screws are available in many diameters, leads, and pitches. Trapezoidal screws use bronze or plastic nuts with optional steel flanges.

### TRAPEZOIDAL SCREW AND NUT

Similar in construction and materials to PowerAc Inch Acme Screws and Nuts, the Trapezoidal thread form has been enhanced to include a centralizing thread form to prevent wedging and binding. See the PowerAc technical data on pages 2-9 for additional screw and nut details.

Standard lead accuracy:  $\pm 6.25\mu\text{m} / 25\text{mm}$   
 Temperature Range: Plastic Nuts:  $-9^\circ$  to  $+79^\circ\text{C}$   
 Bronze Nuts:  $-9^\circ$  to  $+177^\circ\text{C}$

*Stainless steel trapezoidal screw assemblies with bronze nuts*

## TRAPEZOIDAL SCREW ASSEMBLIES REFERENCE NUMBER SYSTEM

### 904 - RA / EK / 4N / 1063 / 20904 / FS

#### LEAD SCREW

##### Thread Form Codes

ISO	Dia. x Lead	ISO	Dia. x Lead	ISO	Dia. x Lead
896	= 8 x 1.5	910	= 12 x 6	917	= 18 x 4
897	= 8 x 4	911	= 12 x 10	903	= 20 x 4
898	= 8 x 8	912	= 14 x 3	918	= 20 x 8
899	= 10 x 2	913	= 14 x 4	904	= 26 x 6
900	= 10 x 3 (1.5)	914	= 16 x 2	905	= 40 x 7
908	= 10 x 9	902	= 16 x 4	906	= 55 x 12
909	= 11 x 6	915	= 16 x 6	907	= 65 x 12
901	= 12 x 3	916	= 16 x 8		

#### MATERIAL

**R A**

R = Right Hand Thread

- A = Alloy Steel
- B = Alloy Steel, Milled
- C = Alloy Steel, Ground
- S = Stainless Steel, Rolled
- T = Stainless Steel, Milled
- U = Stainless Steel, Ground

Note: Not all materials are available for all sizes.

#### FIRST END CONFIGURATION

Note: Both Ends must be specified.

Single Bearing Supports are used in conjunction with Type 1N end machining.

Double Bearing Supports are used in conjunction with Type 3K, 3L, or 3N end machining.

Flanged Fixed Bearing Mounts are used in conjunction with Type 5 end machining.

#### EZZE-MOUNT™ / End Machining (see pages 82-85)

- 1 = Type 1      3 = Type 3
- 2 = Type 2      4 = Type 4
- 5 = Type 5

B = Universal Double Bearing Support  
End Cap Facing Screw Thread

C = Universal Single Bearing Support

D = Flanged Single Bearing Support  
Flange Facing Screw Thread

E = Universal Double Bearing Support End  
Cap Facing Away From Screw Thread

F = Flanged Double Bearing Support  
Flange Facing Screw Thread

G = Flanged Single Bearing Support Flange  
Facing Away From Screw Thread

H = Flanged Double Bearing Support Flange  
Facing Away From Screw Thread

lubricants p. 26  
twin-lead screws p. 28  
end machining p. 77  
EZZE-MOUNT™ end bearing supports p. 77  
screw assemblies p. 16

**EK** EK = Universal Double  
Bearing Support,  
with Keyway

#### Shaft Extension (see pages 82-84)

- K = Shaft Extension with Keyway
- L = Shaft Extension without Keyway
- N = No Shaft
- Q = Handwheel

#### MODIFIER LIST

- S or M Required
- F Optional
  - S = Standard, not additional description required
  - F = Round Flange
  - M = Modified, additional description required

#### TRAVEL NUT

Nut will be installed with flange or threaded end toward first end designation. 000000 = No Nut

Use standard part number found in the Technical Data Section for Metric ISO Trapezoidal Screws.

Example: 20904 = 26 x 6 ISO Trapezoidal Nut

#### OVERALL LENGTH (OAL)

Length in mm.

#### SECOND END CONFIGURATION

Refer to the First End Configuration section below

Note: Both Ends must be specified.

## COLUMN STRENGTH: TRAPEZOIDAL SCREWS

Metric Screws are limited by both Maximum Static Load and Slenderness Ratio. See pages 12-13 for reference description on A-B-C-D end fixity.

**Metric to Inch Conversion:** 1 Newton = .224 lbf 1mm = 0.039 in 1 N m = 8.85 in lb

## CRITICAL SPEED: TRAPEZOIDAL SCREWS

Curves are alternately broken and solid for ease of use. The line type has no significance.

**NOTE:** Maximum Speed is limited to 80% of the calculated Critical Speed. See pages 12-13 for reference description on A-B-C-D end fixity.

**Metric to Inch Conversion:** 1 Newton = .224 lbf      1mm = 0.039 in      1 N m = 8.85 in lb

\*8 x 1.5, 8 x 4, 8 x 8

## EZZE-MOUNT™ AND END MACHINING

### INTRODUCTION

Linear motion applications utilizing a ball screw or an Acme screw require this screw end machining matched with precision bearing mounts. Helix, Inc. offers both the bearing mounts and end machining as a complete assembly.

#### Helix can provide the following end machining services:

- Screws cut to precision lengths
- Annealing
- Straightening
- CNC turning and milling
- Grinding
- Assembly of bearing mounts
- Inspection
- Specialized material handling and packaging

## GLOSSARY AND DEFINITIONS

### EZZE-MOUNT

EZZE-MOUNT bearing blocks contain precision anti-friction bearings and are designed to be used with both ball screws and Acme screws. Single and double bearing base mount and flange mount versions of EZZE-MOUNT bearing blocks are available.

### STANDARD ENDS

For each screw size, Helix has designed a family of standard machined ends applicable to a variety of bearing arrangements. The use of standard machined end designs offers quick deliveries. See page 82-84 for details.

### LAND DIAMETER

The land diameter is the outside diameter of the screw. The difference between the land diameter and the bearing journal is the resulting bearing shoulder.

### ROOT DIAMETER

The diameter of the screw measured at the bottom of the thread. This diameter is used for determining journal sizes. If the bearing journal diameter is larger than the root diameter, thread tracings may be visible. Generally, these tracings do not have an effect on bearing performance.

### JOURNAL

A smooth diameter machined on the end of screw used as a mounting surface for bearings, couplings, pulleys, gears, etc.

### STRAIGHTNESS

Although Helix PowerAc screws are manufactured from straight, cylindrical material, internal stresses may cause the material to bend. When ordering random lengths or cut material without end machining, straightening is recommended. Handling or machining of screws can also cause the material to bend. Before, during and after machining, additional straightening is required.

### END FIXITY

End fixity refers to the method by which the ends of the screw are supported. The degree of end fixity is related to the amount of restraint of the ends of the screw.

The three basic types of end fixity are:

- Free** No support
- Simple** Shaft restrained against radial and/or axial loads
- Fixed** Shaft rigidly restrained against radial, axial and moment loads

See pages 8 and 9 for a more detailed definition of end fixity.

### LOCKNUT THREADS

Locknut threads are machined to allow the bearing retention on the screw shaft by means of a locknut. The thread used on standard machined ends follows American National Form NS Class 3. Precision ground locknuts are available from Helix on special order.

### UNDERCUTS AND RADII

Whenever a shaft changes diameter, an undercut or a radius is machined into the transition to minimize stress concentration. Undercuts are preferred for bearing shoulders because they allow clearance for the corner of the bearing. (See FIG. 1)

FIG. 1

### CONCENTRICITY

Concentricity refers to multiple diameters sharing the same center. For end machining, close concentricity allows all components to rotate around the same axis resulting in smooth operation and long operating life.

# MACHINED ENDS DRAWINGS AND CODES

Specifying standard machined ends results in quicker deliveries. The machined ends shown below represent designs that are compatible with common application requirements for either simple or fixed bearing support. Included in the chart are the

locknut and lockwasher identification. These standard ends may be machined and ground to finish size. NOTE: A Type 1N end is required for single bearing EZZE-MOUNT™. A Type 3 K, L, or N end is required for double bearing EZZE-MOUNT.

**Type 1K** (with keyway)  
**Type 1L** (without keyway)

**Type 2K** (with keyway)  
**Type 2L** (without keyway)

**Type 1N**

**Type 2N**

**Type 3N**

## END TYPES

- 1K, 2K, 3K and 4K are designed with a shaft extension and keyway for square keys.
- 1L, 2L, 3L and 4L are designed with a shaft extension without a keyway.
- 1N, 2N, 3N and 4N are designed to be a non-driven support end.
- Double bearing supports use a Type 3N, 3L and 3K.
- Single bearing supports use Type 1N.

Where standard ends do not satisfy the application requirements, special ends may be machined to customer specifications. Please submit a print for a prompt and competitive quotation.

## PRECISION LOCKNUTS

Helix offers precision ground locknuts for extreme applications requiring ground face and precision ground thread with extra thread engagement. These locknuts have radial thread set screws to ensure secure positioning. Please request a catalog.

# EZZE-MOUNT™ UNIVERSAL MOUNT BEARING SUPPORT WITH MOTOR MOUNT

Universal Mount with motor mount includes an EZZE-MOUNT block with a motor mount for easy, accurate installation of ball screw and acme screw assemblies.

EXAMPLE:  
1000-0250 SRT RH / U3 / 4N / 41.87 / SBN7508 / FS

EZM-2020-34

**NOTE:** When selecting the bearing support for an application with high axial loads, the capacities of the bearings and locknuts must be considered.

### SECTION A-A

- lubricants p.26
- twin-lead screws p.28
- end machining p.77
- EZZE-MOUNT™ bearing supports p.77
- screw assemblies p.16

# LINEAR MOTION APPLICATIONS

High Quality, Precision Linear Motion Solutions

## LIFE SCIENCES

- Auto samplers
- Syringe pumps
- Microscopes
- MRI scanners
- CT scanners
- Radiographic machines
- In-vitro diagnostics
- Genomics
- Blood gas chemistry

## PRINTING & BINDING

- "Z" axis actuators
- Multi-axis gantries
- 3D printing
- Automation / Material handling
- Additive manufacturing (AD)
- Large format sign printing
- Digital offset printing process
- Folding and sealing equipment
- Thermal CTP systems

## SECURITY - MILITARY

- Automated door locking systems
- Pan-tilt-zoom cameras
- Automated gates
- Tactical automated security cameras
- Missile fin actuation
- Tank sighting systems
- Drones and UAVs
- Torpedo fin actuation
- Guided munitions

## SEMICONDUCTOR

- Burnishing stages
- Stacking systems
- Vision inspection machines
- X, Y, Z gantries
- Wafer elevators / Wafer handling
- Acoustic microscopes
- Ultrasonic imaging
- Tuning coils
- Vacuum chamber doors
