Helix Linear Technologies, Inc., Beachwood, Ohio USA

Company

Helix Linear Technologies is a global manufacturer of linear actuators, lead screws and ball screws. Serving clients in the ærospace, medical, life science, security, semiconductor, and defense industries, we focus on helping our customers achieve their application and profitability goals. Our innovative product design and world-class engineering capabilities solve real-world linear motion issues, building a foundation for our client's long-term success.

Culture

Our culture is rooted in agility, responsiveness, and teamwork. Our team comprises happy, competitive professionals who are experts in manufacturing innovative electromechanical linear motion solutions. We strive to exceed our customers' expectations in all interactions and are committed to continuous improvement.

History

Helix Linear Technologies was founded in 2011 to meet the growing demand for high-precision lead screws in the electromechanical actuation industry. Our rapid growth and expanded product lines now include end-to-end linear actuator solutions, providing our clients with customized options and fully integrated solutions.

Market Segments Served

- Medical & Diagnostic
- Aerospace
- Packaging
- Automotive
- Electronics
- Transportation
- Patient Handling
- Entertainment
- Semiconductor
- Military and Defense
- Factory Automation
- Pulp & Paper
- Steel
- Chemical
- Agriculture/Food Handling
- Tire Manufacture

In a captive linear actuator design, the lead screw is connected to a spline shaft that passes through a spline bushing to keep it from rotating. The spline bushing prevents the lead screw from rotating but allows enough clearance for the shaft to move axially as the lead screw is driven back and forth with a corresponding clockwise and counterclockwise turn of the motor. The anti-rotation feature is inherent in the design and creates a stand-alone unit that pushes and pulls whatever device it is attached to. Because it is independent, this actuator can also provide a push force without being attached to anything. For this reason, it's an excellent choice for push-button applications where the return motion is handled by a spring pre-load or influenced by gravity.

Captive stepper motor linear actuators from Helix Linear Technologies are available in NEMA sizes 8, 11, 14, 17, and 23 with single and double stack options.

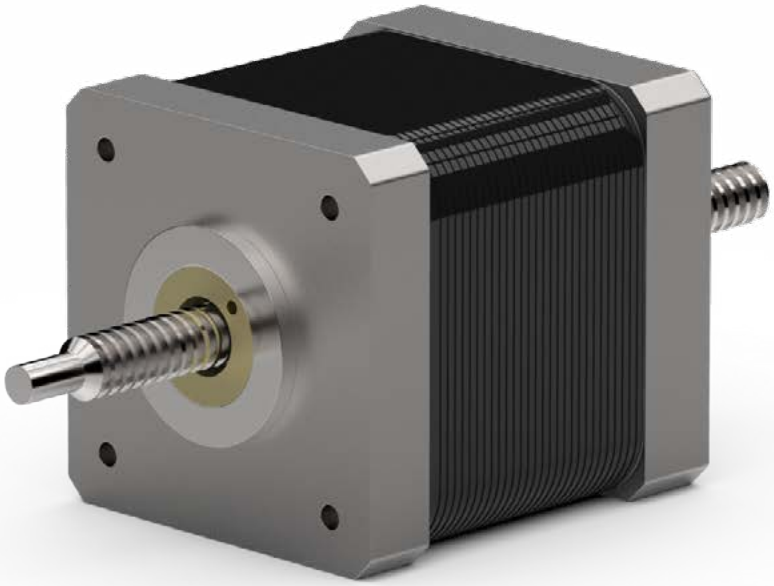
Non-Captive Stepper Motor Linear Actuators
Overview



In a non-captive actuator linear actuator, the lead screw dœs not have an anti-rotation feature. Instead, external mechanical components separate from the motor are introduced into the design to keep the lead screw from rotating. As a result, the lead screw moves back and forth axially by restricting its rotation, which then drives the device it is attached to back and forth.

A non-captive actuator is more straightforward and compact than a captive linear actuator. It is an excellent option when the machine design already includes a built-in guide mechanism or anti-rotation feature. In some specific applications, the lead screw can be provided in longer lengths, supported at each end, and held in tension.

Non-captive stepper motor linear actuators from Helix Linear Technologies are available in NEMA sizes 8, 11, 14, 17, 23, and 34 with single and double stack options.

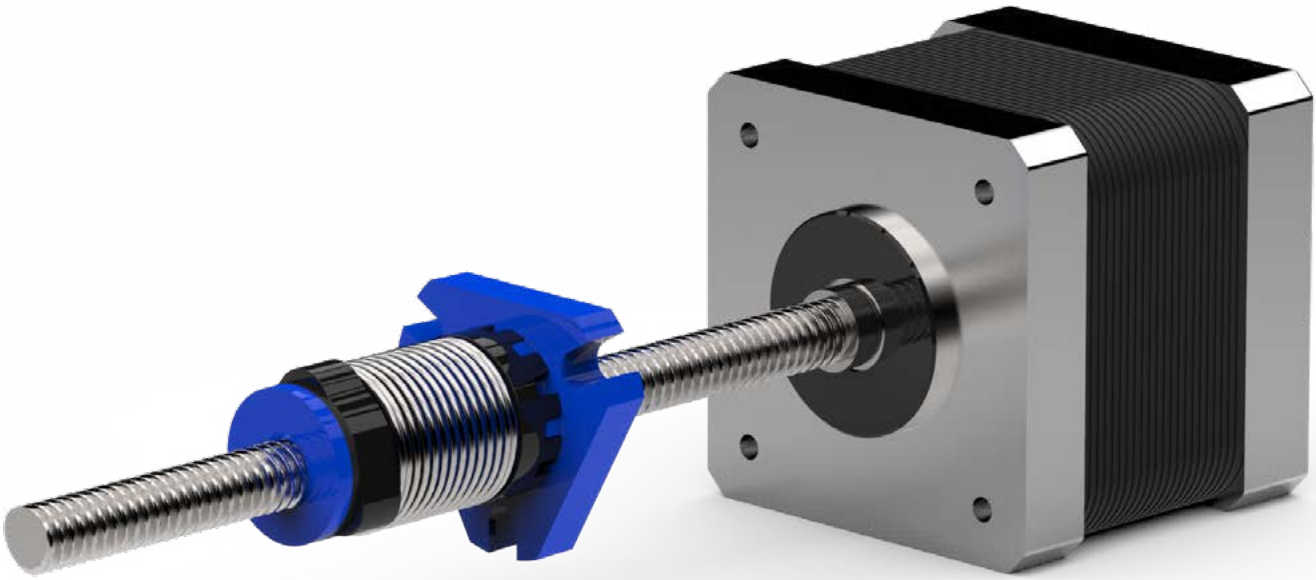
External Stepper Motor Linear Actuators
Overview



External stepper motor linear actuators feature a lead screw that is press-fit directly into the rotor of the motor. As a result, the threaded screw rotates outside of the motor body and is paired with a mating nut. This design configuration eliminates the coupling between the motor and lead screw, saving valuable design space and increasing stroke length. External stepper motor linear actuators from Helix Linear Technologies are also highly configurable with a wide range of standard lead options and numerous freewheeling and anti-backlash nuts styles. Rotation prevention of the nut is necessary to create high-resolution linear motion.

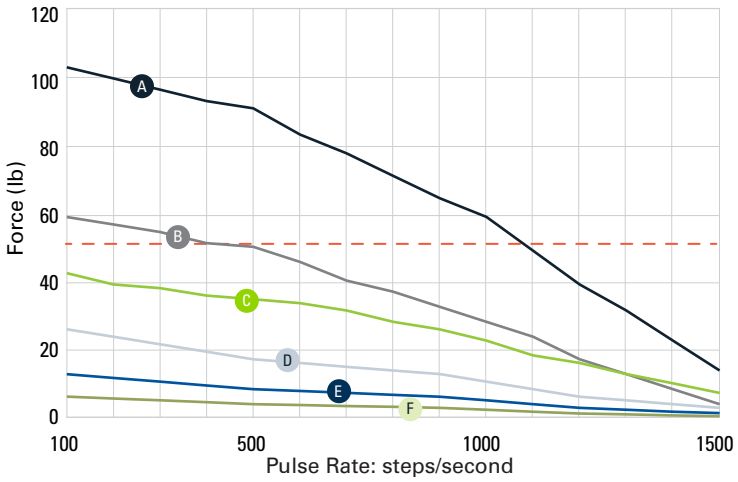
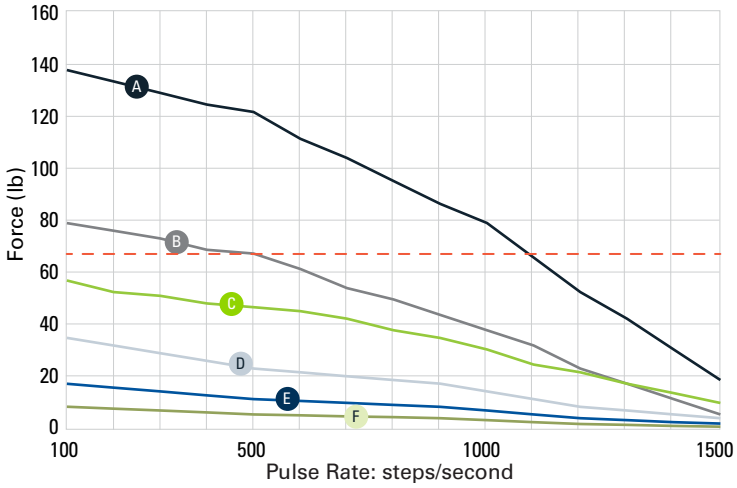
Force v Pulse Speed Chart

Single Stack



Double Stack



- - - - = Recommended load limit

Speed charts are based on using bi-polar motors with chopper drives at 100% duty cycle. Chopper drive curves were created using full steps on a 5 volt motor and a 40v power supply.

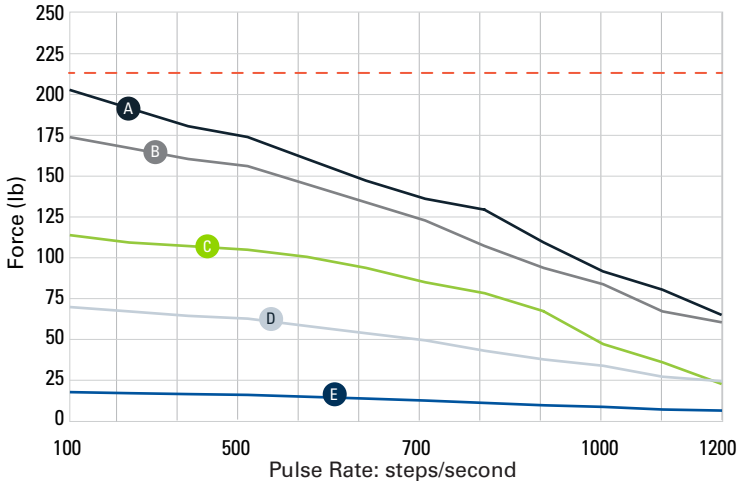
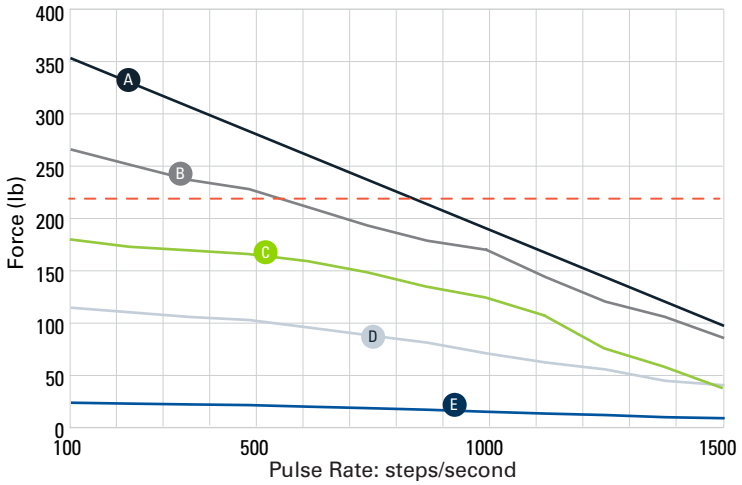
Force v Pulse Rate Charts

Single Stack



Double Stack



- - - - = Recommended load limit

Speed charts are based on using bi-polar motors with chopper drives at 100% duty cycle. Chopper drive curves were created using full steps on a 5 volt motor and a 40v power supply.
